About Sailor Pen

- History of Sailor's innovation
- Biography of the founder
- Our Mission and Values
- Our Craftsmanship
- Our Corporate Identity
- What is Maki-e?
- Nib Lineup
- Details of Major Fountain Pen Brand

Sailor Pen has acquired a significant technical heritage and confidence in our business over the past century since its establishment in 1911. This is thanks to the loyal support of our special customers worldwide.

It is Sailor's spirit to pursue the soft feel and smooth writing performance through in-house production.
Sailor Pen has always been at the forefront of innovation in writing instruments - new materials, new technology, quality, etc. Our challenge has continously been to contribute to society, people and culture always remembering the pioneering spirit and inspiration of Mr. Kyogoro Sakata the founder.

The history of Sailor Pen started when Mr. Kyogoro Sakata encountered a fountain pen. He was given a fountain pen by a friend returning from UK after studying at the Royal Navy. He was immediately inspired to produce fountain pens in Japan himself.

After much experimentation with the solid gold nibs, he perfected the forging and tipping techniques required and this, combined with hand pressed ebonite caps and barrels and with an eye dropper filling system - allowed the first production of fountain pens with gold nibs in Japan.

Sailor's ongoing spirit of inspiration, the soft feel and smooth writing performance, and 'in house' production remain the core strength of the product development, the product quality and the success of the Company worldwide.

MISSION

Our mission is to proudly maintain our long heritage of over 100 years of quality and technical excellence and perfection.

Made exclusively in our own factory in Hiroshima Japan using the best quality materials available our products are brought to you worldwide by our dedicated team of distributors and retailers.

History of SAILOR'S INNOVATION 1911

In 1911, Mr. Sakata and his brother founded the "Sakata-Manufactory" to produce solide gold nibs.

In 1917, the factory relocated to the next town Hamadacho and the Company changed the name to "Sailor Pen Sakata-Manufactory Co., Ltd."

The Company started manufacturing fountain pens here in volumes.

Catalogue (1932)

Old publicity poster

1920~1970

The Company reached a turning point on 27th May 1926, when Imperial Prince Hirohito (Prince Regent, later Emperor Showa) visited the factory to encourage the industry.

This was a great honour for a small company with 300 employees established only 15 years previously.

Taking the opportunity, The Sailor Pen Company aquired significant credibility and notoriety nationwide.

Starting in 1929, fountain pens with gold nibs became very popular and the Company continuously developed unique innovative products for the Japanese stationery industry.

Shortly after the Second World War and after two years setting up the project, Mr. Kyugoro Sakata launched the first Japanese produced ballpoint pens in 1948. The ballpoint pen became a trend in Japan.

First Japan made ballpoint pens

Japan's first fountain pens mass produced by the plastic injection machine

In 1949, Sailor invented the plastic injection machine and started mass producing Japan's first fountain pen using plastic. At that time, the materials of caps and barrels were all made of ebonite or celluloid.

This was another milestone event in the Japanese stationery industry.

In 1950s, many pen manifucturers tried to develop automatic suction type ink cartridges.

In 1954, the Sailor Pen Company invented Japan's first ink cartridges for the fountain pen and introduced them in 1958. This was a great boost for the Company which build up a strong position within the Japanese stationery industry. Incidentally, "Cartridge" was named by the Sailor Pen Company.

In 1963, the Company introduced a mini type portable fountain pen that clipped to the chest pocket. This fountain pen was the latest fashion item at that time.

In 1969, the world's first fountain pen with 21 gold nibs were developed by the Sailor Pen Company. The features of smoothness and elasticity were well-accepted and more than one million pieces were sold.

History of SAILOR'S INNOVATION 1970

In 1972, the Fude Pen (Brush Pen) went on sale by the Sailor Pen Company for the first time in the world. The Company applied the traditional Japanese caligraphy pen to the daily use writing instrument.

In 1973, one of the Sailor's popular fountain pen (#11-506) won the first prize out of 20 pens at the quality competition led by Japan Consumers' Association. This was widely covered by newspapers and the brand benefitted greatly.

The Fude Pen

In the late 70's, the trend of fountain pens had started declining. In order to overcome this situation, the Sailor Pen Company introduced "Candy" series for the younger generations in 1976. This was a big hit worldwide and the Company sold more than 15 millions pieces during four years.

"Chalana", the slimmest fountain pen in the world was also sold in large volumes around the world at the same time.

Chalana Fountain Pen

In 1981, the famous 1911 was created using the accumulated technology and "know how" of the previous 70 years to satisfy customers' growing requirements for genuine quality. With the metal-tempering technology, the pen nib had delicate flexibility providing smooth writing performance. The 1911 pen body had a great balance with the nib, and perfectly fitted the hand.

In 2008, the Japanese Prime Minister presented a Koransha-made Arita yaki fountain pen to the leader of each country as a commemorative gifts at the G8 Summit, held at Lake Toya in Japan.

The concept of Arita-yaki fountain pens is 'cultural fusion' of the Western style technology - fountain pens and the Eastern style - Arita porcelin. It took two years to develop and produce Arita-yaki fountain pens.

In 2011, we celebrated the 100th anniversary.

BIOGRAPHY OF THE FOUNDER, **KYUGORO SAKATA**

Kyugoro Sakata

Kyugoro Sakata was born in Okayama, in the west part of Japan in 1883. When he was 14 years old, he helped in his brother's metalworking factory in Kure, Hiroshima.

Kure is a famous city for the Navy and lots of sailors were in town. Later, Mr. Sakata chose to name the company "The Sailor Pen". As the Japanese Navy had learned a lot from the Royal Navy, many naval officers were often dispatched to England. One of his friends named Chozaburo Shirahige took a fountain pen back to Japan and showed it to Mr. Sakata who immediately thought it could replace the traditional Japanese brush pen. He decided to take the opportunity of developing Japan made fountain pens by himself.

Mr. Sakata and his brother learned by trial and error and eventually they successfully produced the first Japanese fountain pen. In 1911, they founded their first factory to produce gold nibs. The 1911 Fountain Pen product is named in commemoration of the founding date. In 1917, the factory relocated to the next town Hamadacho and started manufacturing fountain pens.

Mr. Sakata was a man who made things happen and his personality and faith really contributed to new product development and quality control.

Eventually, the Sailor Pen had established a permanent place in Japan and began to be widely-known and respected worldwide.

Mr. Sakata was awarded the Blue Ribbon medal for contributions to the industry in 1955. He spend the rest of his life at the mountain villa called Kan-nonsoh, close to the factory.

He passed away in 1961.

At Kan-nonsoh with his wife Yasu in 1933

Our Mission:

Master functional beauty, create sensibility-inspiring instruments

Customers who possess a Sailor's writing instrument are bound to feel the beauty backed by the function and will be filled with the joy to express it through innovation. We will continue to create instruments that inspire people's sensibilities because our thoughts and the spirit of taking on challenges continue. We believe that the power to boldly move forward is guaranteed to open up the future.

Our Values:

Trinity of truth, technique and beauty

AUTHENTICITY

Attitude to keep making the genuine article and spirituality to stick to it.

In Truth, we keep chasing only the «genuine», while having the courage to throw away the non-genuine ones.

TECHNOLOGY

Japanese craftsmanship backed by a history of over a century.

In Technique lives, the idea that no matter how many times you try, there is no final «completion». That is the difference between «technique» and «work». Despite being backed by deep-rooted tradition, we always take on the challenge to reach further heights.

DESIGN

Pursuit of beauty that taps into people's sensibility based on Japanese aesthetic consciousness.

In Beauty, we sublimate Japanese aesthetics into all products and corporate activities. We continue to seek beauty that touches the heart of owners and users of our pens.

« Be a writer who has a strict eye while continuing to be a pioneer in supporting the handwriting culture ».

Our Craftsmanship

Among the numerous writing instruments, there are customers who choose Sailor fountain pens.

« Our desire is for our customers to be pleased » and this sentiment has sometimes led to unconventional ideas and a playful spirit, driving us toward further pursuit of functionality.

« Continuing to be pioneers in supporting the culture of handwriting while also being discerning writers ourselves ».

Since our establishment, our unwavering dedication extends to the intricacies of our craftsmanship, bringing forth true beauty.

Customers who hold Sailor writing instruments will feel the beauty backed by functionality and will be filled with joy in expressing themselves.

Continuing to create tools that stir people's sensibilities remains our commitment to craftsmanship.

Our passion and the soul that dares to take on challenges will persist.

Extract of the video
« Sailor's Philosophy of Craftmanship »

Watch the video here :

The Sailor Pen Co., Ltd. renewed its logo mark and logotype as it celebrated its 110th anniversary in 2021. While inheriting the history and spirituality of the Sailor Pen that has been passed down for 110 years, Sailor sublimated it into a new corporate identity.

An anchor is a symbol of trust and hope; the ancient Greek word for anchor means "bent arm", and ancient figures have left the invisible mysterious energy and the blessing of God in the strong anchor that powerfully holds the ship.

For this reason, the anchor has been and will continue to be a symbol of the Sailor Pen. By keeping the "anchor" motif, which is a symbol of hope and trust, and incorporating the strength of technology and delicate Japanese aesthetics into the logo mark, it can be sublimated to the present day with the spirit of the early days of its founding, and to the future.

SAILOR

Sailor
Blue-Dawn

"SAILOR BLUE-Dawn" has been set as the new color identity. The color is reminiscent of the scenery observed by the founder, Kyugoro Sakata, in Kure (see below), a port city that has a long-accepted continental culture. "Dawn" refers to the time when new things begin and represents the hope for today that is reminiscent of the beauty of the Seto Inland Sea before dawn. We should continue to see this hope in our eyes and our visions for the future. While reflecting on the origin of the color identity and our brand in general, we will set sail for the world beyond the sea to create reliable, quality technology combined with the graceful aesthetic sense of Japanese handicrafts.

Kure is a port city that has a long-accepted continental culture as the main transportation artery. The history of its development and the technological capabilities that have been constantly refined today's world is parallel to the land characteristics of Kure. The fountain pen, an imported product a century ago, will be transmitted from here to the world with Japan's high technological capabilities and aesthetic sense by the pioneering spirit of Kyugoro Sakata.

Traditional Japanese art - created to embody the harmony of man with nature.

Maki-e is a traditional technique whereby the craftsman combines intricate Urushi lacquer painting with a variety of surface decorations, including powdered gold, precious metals, gemstones, mother of pearl...

Typically Japanese designs are inspired and created by well renowned artists and skillfully hand applied using natural Urushi lacquers (produced from special trees) and other precious materials. Special Urushi wood materials are used in the production of decorated tableware, tea ceremony utensils, incense containers, Buddist altars, etc.

The result is a most unique and magnificent surface treatment to be enjoyed by generation to come.

There are several regions where Maki-e are produced. Kaga Maki-e which originates from Kanazawa, is one of the most popular Maki-e techniques. Kanazawa is located to the west of Tokyo and is called "Little Kyoto".

There are mainly three traditional methods to produce Makie-e:

Togidashi Maki-e | **Hira Maki-e** | **Taka Maki-e**

These traditional decoration techniques can be only applied by truly experienced Japanese craftsmen having historical family skills and pride in such traditional art forms.

Taka Maki-e is the very highest level of these decoration processes. The Sailor Pen Company produces some fountain pen using the Taka Maki-e method.

History of Maki-e

Urushi crafts has already started in the Jomon Period (B.C. 14000 - B.C. 400) and the techniques which would become the original Maki-e was produced in the Nara Period (710-794) and further developed in Kyoto since the Heian Period (794-1185). Maki-e became popular among Heian nobility.

In the Kamakura Period (1185-1333), the elegant technique of "Taka Maki-e" was developed. Taka Maki-e involved raised designs (in relief).

In the Azuchi-Momoyama period (1573-1603), Maki-e techniques became even more popular and was used for decoration of temples, shrines and citadels.

In the Edo Period (1603-1868), feudal lords in various parts of Japan invited craftsmen to decorate their battle clothing and equipment and distinctive Urushi crafts flourished in those places. A typical example of these is "Kaga Maki-e", which started when the Kaga clan (the "Maeda" family) invited "Doho Igarashi" who lived in Kyoto around 1630 in order to introduce the unique Maki-e techniques.

In the Meiji Period (1868-1912), craft works including Maki-e were exported to many Western countries to gain foreign currencies. The adoption of Maki-e technique for fountain pen began by several companies in the 1920s.

An exhibition led by Ministry of Education, Culture, Sports, Science and Technology was started in 1907, specializing in "Japanese and Western paintings". Arts and Crafts including "Maki-e / Urushi crafts" were added in 1926 and the exhibition became known as "NITTEN" (the Japan Fine Arts Exhibition) in 1946.

Hira Maki-e

Hira Maki-e is a technique where fine metal powders are sprinkled over a design or pattern drawn with lacquer, and then coated with lacquer to fix them place. Afterward, the surface is polished. Compared to the intricate process of Togidashi maki-e, Hira maki-e is a simpler technique that emerged during the Heian period and further developed during the Kamakura and Muromachi periods.

Taka Maki-e

Hira Maki-e is a technique where fine metal powders are sprinkled over a design or pattern drawn with lacquer, and then coated with lacquer to fix them in place. Afterward, the surface is polished. Compared to the intricate process of Togidashi maki-e, Hira Maki-e is a simpler technique that emerged during the Heian period and further developed during the Kamakura and Muromachi periods.

Maki-e objects : captivating works of art, symbolizing the richness and high level of Japanese culture.

Decorative techniques

Others Makie-e techniques:

Togidashi Maki-e

Patterns and Designs painted with lacquer are sprinkled with gold powder, silver powder, tin powder etc., while the lacquer is still wet, and then left to dry (Maki-Hanashi). During the Nara period, this state was considered to lack luster and durability. To compensate for this drawback, a technique was developed where, on top of the Maki-Hanashi, lacquer is thinly applied and allowed to dry, and then the patterns and designs are polished with charcoal.

Shishiai Maki-e

Shishiai Maki-e refers to a technique that combines Togidashi Maki-e and Taka Maki-e. It is characterized by its thick and three-dimensional appearance, often used for landscape paintings and mountain-water scenery. This technique flourished during the Edo period.

- Kintame · Tamenuri is a technique of sprinkling gold and silver powders densely over the surface of an object.
- Hirame-ji – a technique of sprinkling gold and silver flakes sparsely onto the surface and then polishing them to create an elegant effect.
- Pear Land – Nashiji – a technique where a thin layer of pear skin powder is sprinkled and the multiple layers of lacquer are applied. The surface is polished to create a finish that resembles the texture of a pear's skin.
- Raden – a technique where the thin inner layer of a shells such as abalone, turban shells, and cowries is peeled off, thinly sliced, and applied to match patterns and designs. These shells are then affixed onto the surface and coated with lacquer before being polished to create beautiful finish.
- Kinma – the technique involves applying multiple thick layers of lacquer, then painting colored lacquer into the engraved patterns on the lacquered surface. After drying, the piece is polished to a brilliant finish.
- Chinkin – this technique involves using a sword or knife to engrave patterns on the lacquered surface, then pressing gold powder or gold leaf into the carved lines. Excess gold is wiped away, leaving only the gold in the grooves created by the carving.
- Zougan – The technique of 'zougan' involves carving patterns into metal or other materials

The best writing experience

Along with the fact that Sailor produces unique and various types of nibs, the soft feel and smooth writing experience stems from the skilled craftsmen who have perfected the original nib technology since 1911.

Using high-quality materials, large capacity nib feeds to prevent problems from temperature and pressure changes, the structure of the pen is also designed to prevent nib dry out.

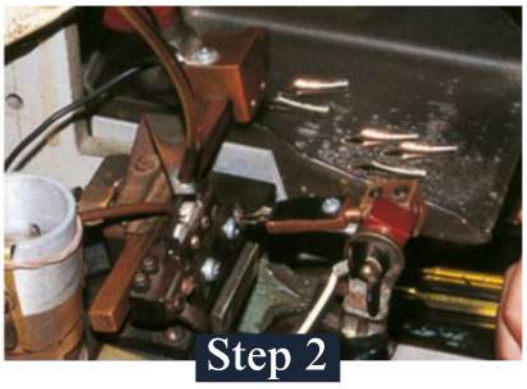
All of these ongoing processes have evolved to provide the very best writing performance possible to meet today's highest customer expectations.

How do we make our fountain pen nibs ?

Step 1

Firstly gold and other precious materials are melted and then rolled into plate. It is then punched into shape and special tipping material is carefully applied to the pen nib.

This tipping material determines the nib width, and it is polished extensively.

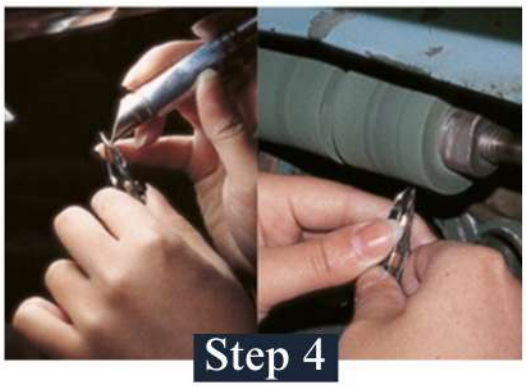


Step 2

The whole nib including the tip is then slit down the middle to meet a carefully positioned hole cut on the center of the nib. This process determines the perfect ink flow and nib elasticity and is critical to maintain perfection.

Step 3

Finally the top of the nib and tip are shaped



Step 4

After final buffing of the nib, it adds a

Standard Nib

To cater for individual preferences and purpose of use, Sailor offers a range of available nib grades with most of the models.

EF (EXTRA FINE)

Since it can write characters with extremely fine lines, it is enjoyable for those who appreciate small writing and for writing on small-sized items.

M (MEDIUM)

It possesses an ideal writing style for any kind of text and is widely used due to its versatility, making it a classic choice. Highly recommended for beginners as well.

F (FINE)

It can write clear, fine lines, allowing for beautifully detailed characters. Its writing style evokes a sense of tranquility and peace.

B (BROAD)

Its pen tip allows for flowing, larger characters as well as bold and daring writing. It is perfect for tasks like checkmarks and signatures.

M (MEDIUM FINE)

It has a soft elasticity, and even with its slim design, it allows for easy variation in thickness and thinness. The writing style conveys a sense of gentleness, as the pen tip exudes a feeling of tenderness.

Z (ZOOM)

With variations in writing angle and the difference between vertical and horizontal strokes, this pen tip allows for creating lines ranging from thin to thick with ease, offering a versatile writing experience. Its usability shines through depending on how it is used.

M (MUSIC)

Special Nib

As a result of dedicating themselves to the pursuit of a refined writing experience and inheriting the traditions of craftsmanship, skilled artisans have poured their efforts into creating the ultimate pen tip. They have gained such trust and received acclaim to the extent that when it comes to fountain pen nibs, they are often referred to as 'Sailor'.

With its outstanding writing experience, it offers a definite sense of satisfaction where you can truly savor the essence of a fountain pen. This prideful pen tip is a masterpiece crafted only by skilled artisans.

USING THE PEN (M)

UPRIGHT

NAGINATA TOGI

The "Naginata Togi" nib tip is considerable longer than regular pen nib tips. The pen point is expertly ground and specially polished into a shape like the blade shape of the famous "Naginata" Japanese long sword. This pen nib allows a broad range of writing angles and smooth calligraphy even when writing with light pressure. This is one of the supreme writing instruments produced by Sailor's craftman's experienced skills.

NAGINATA CONCORD

When used in regular angle the strokes are sharp and delicate, and it has very bold and calligraphic writing strokes when the nib is reversed and used at a narrower writing angle.

NAGINATA FUDE DE MANNEN

The "Naginata Fude de Mannen" nib, with its tip bent upward, producing smooth writing at any angle. Holding the pen upright produces bold calligraphic strokes.

NAGINATA EMPEROR

The « Emperor nib » is hand crafted and created by placing a solid 21k flexible gold tab onto the top of the original nib. This added tab has a special shape and tip which acts as an extra ink reservoir for added ink consumption thus allows stable ink flow to the nib.

NAGINATA CROSS POINT

This nib has two pen nibs together on top of one another. The nib allows a variety of writing strokes at all different writing angles.

NAGINATA CROSS CONCORD

This nib is perfectly designed for fast writing where a heavy ink lay down is required.

NAGINATA CROSS MUSIC

The "Cross Music" nib is a version of the Music nib and is specially engineered by the Sailor nib specialist to provide bold calligraphic writing.

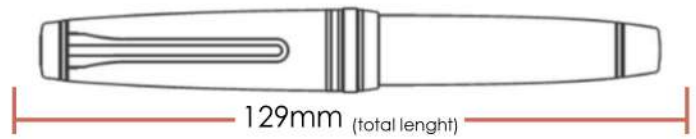
NAGINATA KING EAGLE

The King Eagle nib is crafted by layering three nib sheets at the tip, with a pen point that is even taller than that of a Cross Point nib.
It produces especially bold horizontal strokes and allows the writer to enjoy dynamic line variation depending on the writing angle and direction.

[FOUNTAIN PEN]

EXAMPLE : PROFESSIONNAL GEAR

Body Size : φ18×129mm (including clip)



Barrel Diameter : φ13mm

▼ Diameter is measured and indicated based on the position where the customer grips the pen during writing.

Warranty

Sailor Writing Instruments are **warranted against original factory defects** in material and workmanship for a period of **one year** from the original date of purchase from the original and Sailor Authorised retailer/vendor where the instrument was obtained.

Should this instrument be found to have such a defect, **it should be returned complete with all pen parts to the original and Sailor authorised retailer/vendor** for processing. This original stamped/dated warranty document or the original sales receipt for the instrument must accompany the pen for any warranty or repair claims.

This **warranty does not cover any defects or damage as a result of misuse, abuse, neglect, accidental damage, tampering**, and loss of original parts or reasonable wear and tear of normal use (which will be determined by Sailor). In such cases the standard repair and /or parts replacement charges will apply. This warranty is not applicable to product originally purchased through unauthorised retailer/vendors.

Kindly also note that we do not have a nib exchange policy for new pens and it is important to ensure that the correct nib choice is made at the original purchase of the product.

The following table provides estimated costs for various repairs and services. Please note that these estimates are provided as a general guide and may be adjusted based on several factors including but not limited to the current EUR/JPY exchange rate, the type of nib (EF to MS), and the plating (GT / RT). This table is intended for informational purposes only and should not be considered a definitive quote or offer. It is recommended to obtain a detailed assessment and quote from a qualified professional before proceeding with any repairs.
